Maths Skills

<p>Our Calculation Policy</p>	<p>At Chancel we have compiled a comprehensive calculation policy that meets the requirements set out in the National Curriculum 2014 for the teaching and learning of mathematics. It has been developed by the mathematics subject leader and all teaching staff so that the understanding of mathematical principles and methods is consistent and progressive. Teachers use the methods set out in the policy to teach the year group specific objectives from the National Curriculum.</p> <p>The calculation policy reflects the age-related expectations of the National Curriculum 2014. At Chancel we feel it is vital that children have complete accuracy in using an appropriate method, and are able to confidently use and apply their understanding of a given method before they move on. Only once this has been demonstrated, and the teacher is confident that the child has mastered a particular method, will they move on to the next. Therefore, the set methods for each year group may not reflect the methods that every child in that group is using. Where appropriate, the CPA approach is used to ensure understanding before progressing to the next stage.</p> <p>Children will also be provided with 'real-life' scenarios so that they can see the value and relevance of learning an efficient method for calculating. Methods will also be practised regularly to ensure confidence and accuracy in application. This will help children to both value their learning and become more confident as independent mathematicians. Children will not progress to the next efficient method until they have demonstrated accuracy of method in using and applying and contextual problem solving.</p>		
<p>Arithmetic</p>	<p>To ensure that sufficient lesson time is spent on the application of skills to problem solving and reasoning questions, at Chancel all year groups take part in a daily arithmetic session specifically to focus on the four operations and fractions. Having discrete arithmetic sessions allows the operations and skills to be taught discretely before being applied in other contexts.</p>		
<p>Multiplication Progression <small>(To ensure readiness for the Y4 MTC)</small></p>	<p>Year</p>	<p>National Curriculum Objectives</p>	<p>Vocabulary</p>
